

TRANSFERRING INTERRUPTS FROM A PERIPHERAL DEVICE TO A HOST COMPUTER SYSTEM

ABSTRACT

Methods, systems and apparatus for transferring interrupts from a peripheral device to a host computer system is described. In an example embodiment, an apparatus comprises a buffer for storing indications of interrupts generated by the peripheral device. In response to a preset condition being met, a controller generates a control data block having a payload portion, moves the contents of the buffer to the payload portion of the control data block, and sends the control data block to the host computer system.
